Key Strengths

- **Learning Language Skills** : The ability to focus on interesting foreign languages, English and Japanese certificates, as well as simple conversational languages, are Arabic and French.
 - **Communication Skills** : I was able to actively accept their language or culture through volunteer activities or Arab cultural club activities to help students studying abroad, and actively tried to become friendly through dialogue.
 - **Problem-solving Skills** : While learning in the SCIT Master, I was able to find and solve the cause before others when there was a programming error or design error.
-

Work Experience

Organisation G-School Volunteer in Sun Moon University

Role Volunteer

March 2016 – June 2016

-

Interests

- **I like to meet people from other countries. So, I could learn many cultures of different countries by choosing many international relations departments as my dual major.**
- **I like to watch the travel program. Because I can know new culture where I can't go myself and I can be interested.**

Why Japan and ICT?

I wanted to take up the challenge and explore the future of IT to fulfill the needs of diverse and granular customers. That is why I chose IT Industry. I believe that the ability to develop programs that are the basis for the future services in the IT field, and to understand that the 'product' is something customers require. I want to use IT technology to develop programs that are used around the world. I want to create a chat program that can connect people closer, or a security program that can protect people. I'll be able to bring out my potential if I keep trying. A reason for choosing Japan in the IT field is because I believed that I have a great chance of my own growth. In order for a company to grow, a systematic education system that anticipates the capabilities and potential of employees is required. There are many companies investing in the future, especially due to the social environment that they want to grow together. I'd like to take part in a company like that with passion.

Vision & Mission

I believe that the most important part in many cases are the basics. I would like to grow up reinforcing what I lack. I'd like to learn about my job and get a professional certificate, then create my own program development process. I want to create my own program after 5 years, starting from scratch. I think that's how you'll be able to see how experienced you are at your job and what you're lacking. I would like to solve the deficiencies by working with my colleagues. My ultimate goal is to be a developer who can lead the team. For the IT industry, you should always be up to date. Therefore, I am not satisfied with the current state, and I will continue to study and grow along with my colleagues and juniors.

Value

I like to meet new people and have new experiences. But I don't get tired of something new. During my major course, aside from the basics of programming that I learned how to derive results from planning. I was able to gain practical experience based on what I learned during the team project. By using the knowledge I learned in my major course in a real project, I learned the operational structure of the company and gained experience that I could not gain easily elsewhere. It's my strength is to have passion for goals. I have always done well during team projects and mentored activities for international students while learning responsibilities and sacrificing for others. When necessary to complete a report or presentation of a presentation, always plan carefully so that there is no disruption to the team's activities. I always planned carefully to avoid disruption to the teams' activity when a report or a presentation was required. When we worked as a team, I was able to get started before anyone else and lead the team to success. Until now, I have gained the trust of my colleagues and juniors with positive minds and active attitudes. From now on, I want to grow up with everyone through seamless communication, based on my experience.
